## ACCESS TO SIS II

# 1. ACCESS TO SIS II

In 2022 there were a total of **12,733,815,938** accesses to SIS II by Member States<sup>1</sup>.

This represented an **increase of 82% compared to 2021**. Comparing to 2019 pre-COVID-19 levels, accesses increased by 91%.

A breakdown of accesses per Member State is provided in the table in Figure 1.

Member State	Total searches	Create	Update	Delete	Change expiry date	Total CUD	TOTAL Accesses
AT	179,639,082	145,663	84,751	40,780	11,268	282,462	179,921,544

Figure 1: Breakdown of 2022 SIS II access per Member State

Two types of accesses are possible:

- **Searches** (queries) made against the central SIS II or a national copy of the SIS II, regardless of whether or not there was a hit. Member States without a national copy, and therefore searching only the central SIS II are Denmark, Finland, Liechtenstein, Norway and Slovenia. In addition to that, in 2022 there were 15 Member States (Austria, Belgium, Croatia, Czechia, Greece, Hungary, Iceland, Luxembourg, the Netherlands, Poland, Portugal, Romania, Slovakia, Sweden, and Switzerland) which partially used the central SIS II for alphanumeric searches. This data is reported by Member States on a yearly basis.

In 2022, there were **12,714,610,758 searches** performed by the Member States.

<sup>1</sup> Europol and Eurojust within their respective mandates, are allowed to search data in SIS II. Europol reported having used the system in 2022. However, access to SIS II by EU Agencies is not included in the scope of this document, as it only covers access by Member States.

- Operations performed in order to **create** and manage alerts - **update, deletion or change of expiry date**. This data is retrieved from the central SIS II.

In 2022, there were over 19 million operations in terms of alert management, increasing of over 3 million compared to 2021. However, the number of operations is still far from the pre-COVID-19 levels, when over 26 million were performed in 2018 and over 28 million in 2019.

Since March 2018, in addition to alphanumeric searches, it is possible to perform **AFIS searches** against the central SIS II. These searches are performed only against the central system, and allow a person to be identified based on fingerprints stored in SIS II.

In 2022, AFIS searches were regularly performed by 28 Member States, whereas Poland and Estonia did not perform any AFIS searches.

In absolute terms, the Member State accessing SIS II the most in 2022 was the Netherlands (with almost 27% of the total access to the system) as in 2021; followed by Belgium (23%) France (9%) and Spain (8%).

Figure 2 shows the trend in searches performed by Member States in SIS II in the last 7 years. In the first 4 years reported, the increase was steady. In 2020, the sharp drop caused by the COVID-19 crisis stands out. On the other hand, in 2021 and 2022, a major increase in searches reported was witnessed, a respective increase of 82% in 2022 compared to 2021, and 88% in 2021 compared to the previous year.

Figure 2

## 1.1 SEARCHES PER MEMBER STATE

Member States report two types of searches:

- **Manually processed searches** are defined as searches (queries) involving human intervention, e.g. searches by staff using radios, telephones, computer terminals and, document scanners and other forms of traditional searches where a user makes the decision to carry out a search.
- **Automatically processed searches** happen without any human intervention, e.g. searches carried out by automatic number plate recognition systems (ANPR) or other types of automated bulk searches.

A breakdown of manual and automated searches is provided in the table in Figure 3<sup>2</sup>.

Figure 3: Breakdown of 2022 SIS II searches per Member State<sup>3</sup>

<sup>2</sup> Belgium, Croatia and the Netherlands reported a major increase in the use of ANPR systems. Norway reported that the increase in searches was due partially to the introduction of new systems that directly check SIS II: the new Advance Passenger Information system for extra-Schengen flights, and the new system for checking passengers and crew on ships. Slovakia reported that the increase in searches compared to last year is due to the Ukraine migration crisis.

<sup>3</sup> Some Member States did not provide a breakdown of the different searches, only the total number. This implies that the total number of manual searches and total of automated searches for all Member States are only partial (and their sum does not equate to the total number of searches).

Not all Member States provided a breakdown of searches. Estonia, Germany, and Switzerland did not provide this data.

The vast majority of Member States reported a substantial increase in searches in 2022 compared to 2021. The number of searches is getting back to the level which they used to be prior to the Covid-19 restrictions, with regular passenger traffic at borders resuming. Liechtenstein and Slovenia reported a slight decrease in the number of searches performed compared to 2021.

The systematic **use of ANPR systems** by an increasing number of Member States is clearly visible, as it amounts to more than double of the automated searches reported. Automatic searches totalled 4 billion in 2021, increasing to 8.3 billion in 2022.

It is complex to compare Member States when it comes to the use of SIS II, which depends on many factors, including the definition at national level of business processes and workflows. Furthermore, each Member State has its own crime level and different geographical situation that determines the number of border crossing points and the length of the external land borders. The map in Figure 4 shows SIS II searches per Member State per 1 million inhabitants<sup>4</sup>.

Figure 4

<sup>4</sup> The population data is taken from 2022 public Eurostat data. # 2

## DATA STORED IN SIS II

## 2. DATA STORED IN SIS II

On 31 December 2022, **86,461,806 alerts** were stored in SIS II. The table in figure 5 provides a breakdown of alerts per Member States for the different data categories.

Member State	Person	Vehicle	Aircraft	Banknote	Blank document	Boat	Boat engine	Container	Firearm	Industrial equipment	Issued document	Licence plate	Vehicle registration document

Figure 5: Data stored in SIS II on 31 December 2022

As per the new SIS legal base<sup>5</sup>, security alerts will be allowed only as for Article 36. Therefore, between March and November 2022, eu-LISA progressively deleted all historical security alerts stored in SIS II, which amounted to 6.5 million alerts at the beginning of 2022. By 31 December 2022, no security alerts were stored in the SIS II database.

The deletion campaign performed by eu-LISA, followed an ad-hoc controlled expiry. Once expired, those alerts were moved out logically from the central SIS II, and the alerts were eventually physically deleted on the following night with a re-occurring script. The process was fully transparent to the Member States.

In SIS II two types of alerts are stored: alerts on persons and alerts on objects.

**Alerts on persons** may be issued for the purpose of enforcing entry bans of third country nationals, search for arrest and surrender, search for missing or vulnerable persons (in particular children), search for whereabouts of persons important for criminal procedure (e.g. witnesses), and discreet and specific checks.

**Alerts on objects** may be issued:

- for discreet or specific checks, pursuant to Article 36 of the SIS II Decision on vehicles, boats, aircraft and containers;

<sup>4</sup>Regulation (EU) 2018/1861, Regulation (EU) 2018/1862, and Regulation (EU) 2018/1860

- for the purpose of seizure or use as evidence in criminal proceedings, pursuant to Article 38 of the SIS II Decision<sup>6</sup> on vehicles, boats, aircraft, trailers, caravans, industrial equipment, outboard engines, containers, firearms, blank documents, issued identity papers<sup>7</sup>, vehicle registration documents, and banknotes.

In line with the trend observed in the last years, by the end of 2022 *alerts on persons* represented 1% of the total amount of alerts stored in the data base. The biggest category was *issued document*, counting for almost 81% of the total alerts stored (see Figure 6).

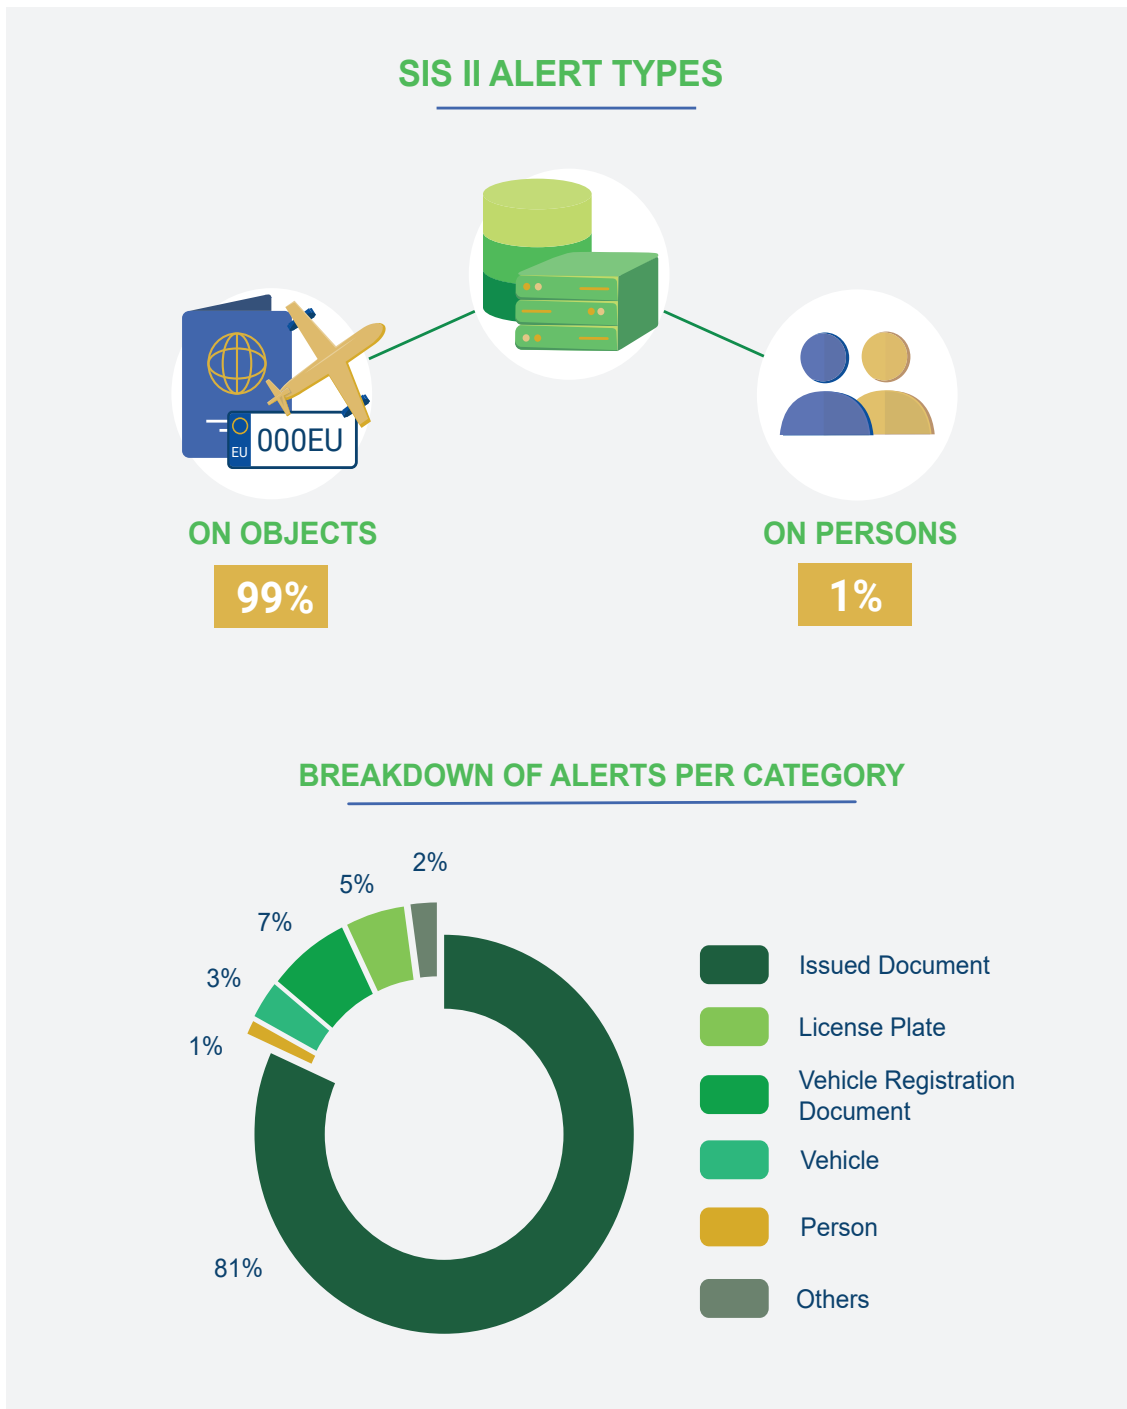

Figure 6

<sup>6</sup> As mentioned above, security alerts stored in the past have been deleted.

<sup>7</sup> Issued identity papers such as passports, identity cards, driving licences, residence permits and travel documents, which have been stolen, misappropriated, lost or invalidated.

In addition to the security alerts category, four other categories reduced their share in 2022 compared to 2021, the biggest one being banknotes with a reduction of 15%. On the contrary, the other nine categories witnessed an increase in their share.

By end of 2022, the total amount of data stored in SIS II decreased by 4% compared to 2021, mainly due to the deletion of the security alerts.

A comparison with previous years is possible, taking into account certain events. Figure 7 shows the total number of alerts stored in SIS II over the last 7 years, 2016-2022.

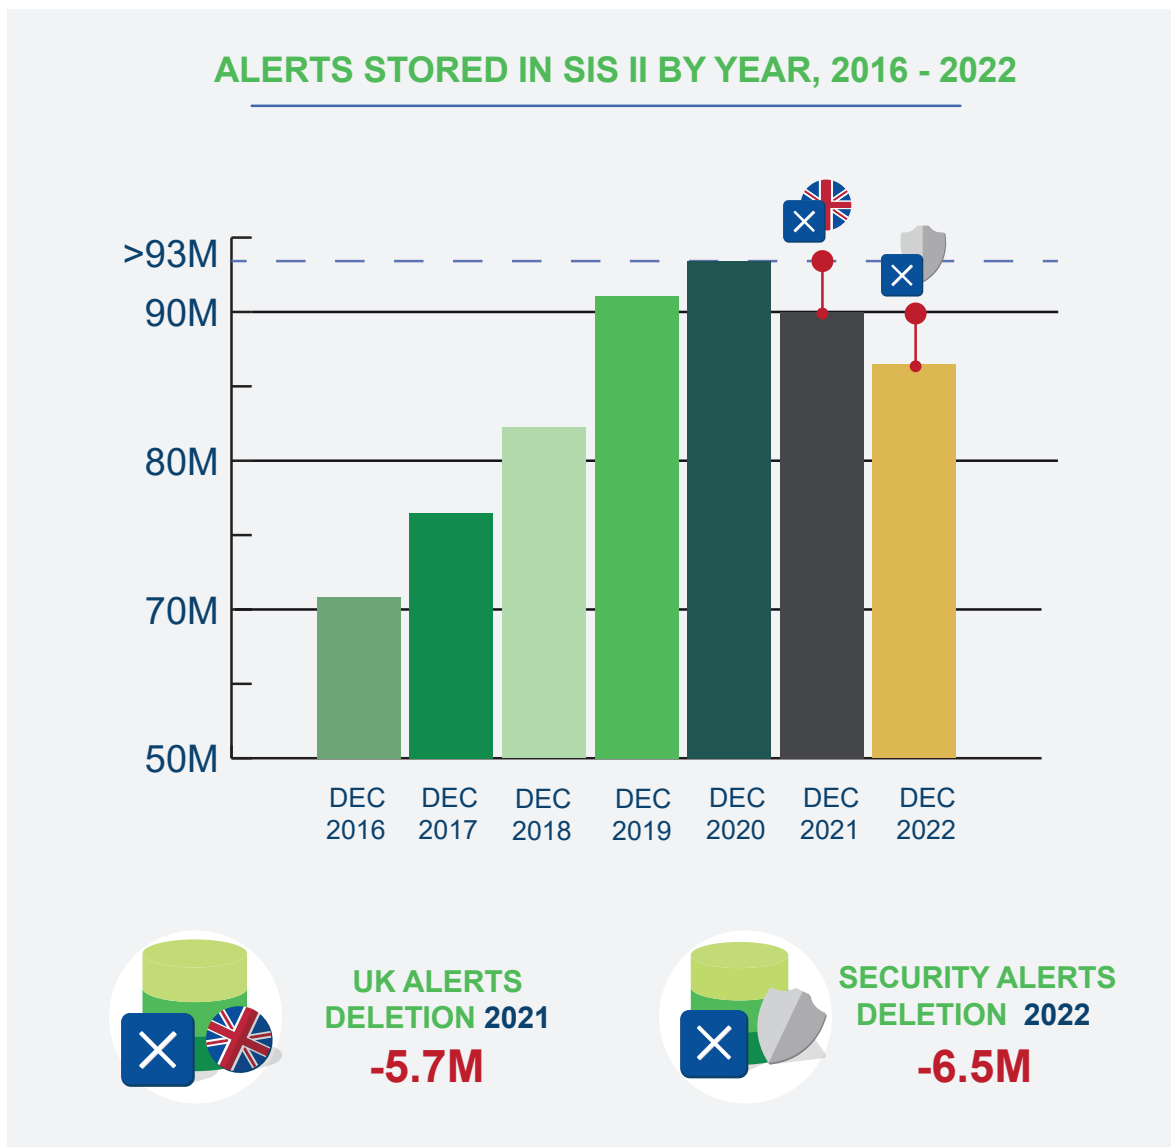

Figure 7

Following a positive trend with annual increases in the database observed since eu-LISA took over the operational management of SIS II in 2013, a record level was reached by the end of 2020, with over 93 million alerts stored in the data base. Following that, there were 2 years of a decrease due to the deletion of UK data in 2021, and the deletion of the security alerts in 2022.

## 2.1 DATA PER MEMBER STATE

In terms of data stored per Member State, the main contributors to the system remain the same as in previous years. By the end of 2022, Italy was still the Member State providing the majority of SIS II alerts, with over 21% of the total, closely followed by France (19%), Germany (13%) and Spain (9%).

The table in Figure 8 provides the total amount of alerts stored by each country by the end of 2022.

Despite the deletion of security alerts, compared to the end of 2021, 18 Member States – Austria, Belgium, Croatia, Czechia, Finland, Greece, Iceland, Ireland, Latvia, Luxembourg, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Spain, and Sweden – saw a net increase in alerts stored in SIS II.

Figure 8: Total alerts per Member State on December 2022

It is complex to compare Member States when it comes to their use of the system and the amount of data stored. The latter depends on many factors, including the definition of business processes, workflow and national legislation. The map in Figure 9 shows SIS II alerts per Member State per 1 million inhabitants.

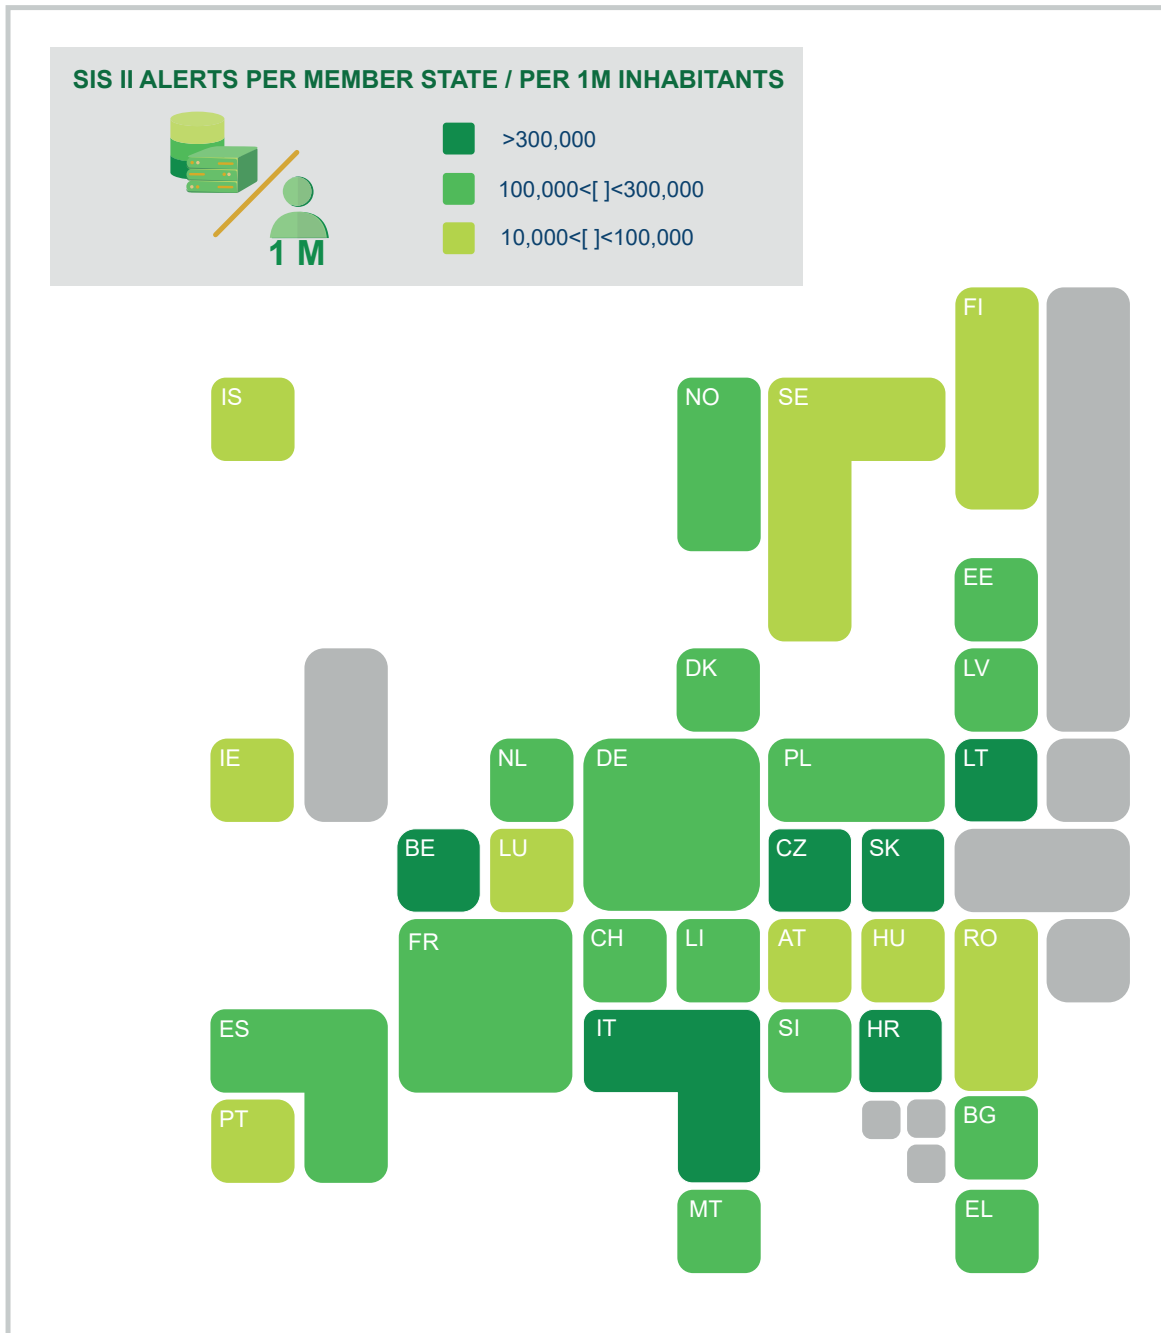

Figure 9

## 2.2 ALERTS ON PERSONS

By end of 2022, the SIS II data base had 1,002,342 *alerts on persons* stored. Figure 10 provides a breakdown of alerts on persons according to the reason for creating them.

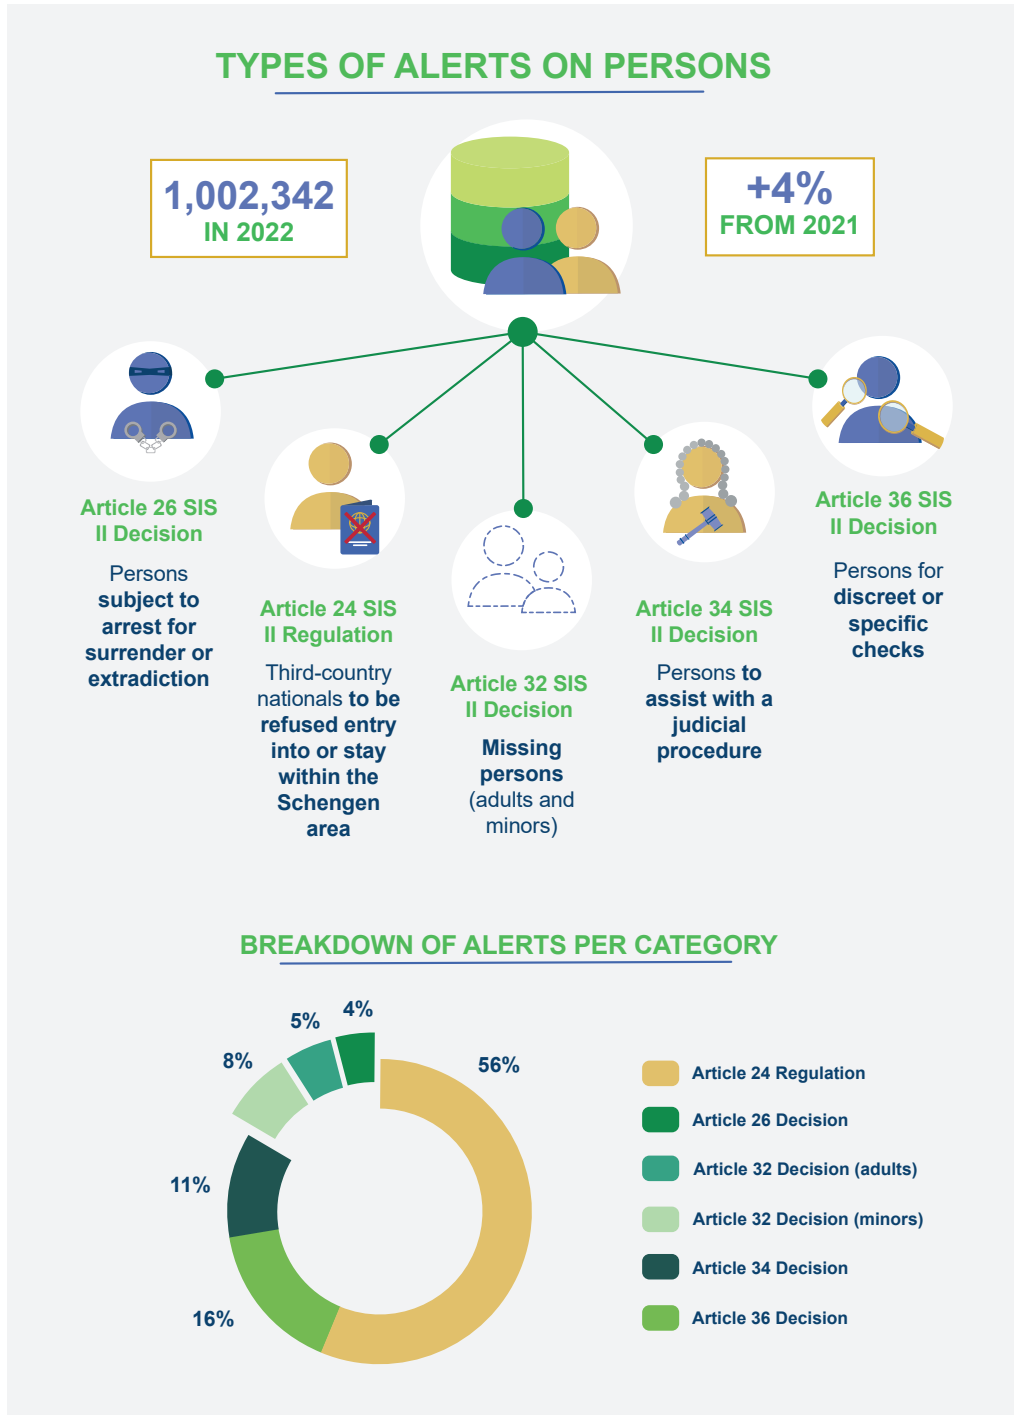

Figure 10

Similar to the trend observed over the past few years, the majority of alerts (56%) were alerts issued pursuant to Article 24<sup>8</sup> of the SIS II Regulation (third country nationals to be refused entry or stay within the Schengen area).

<sup>8</sup>The increase of hits Article 24 was mainly due to the checks performed at the east borders in conjunction with the war in Ukraine.

# 3

## HITS REPORTED IN SIS II

### 3. HITS REPORTED IN 2022

In 2022, a total of **263,452 hits on foreign alerts** were reported via the SIRENE Bureaux. A breakdown of hits, per the alert generating them, is presented in the table below (Figure 11).

Hits on foreign alerts saw an increase of 18% compared to 2021. On the other hand, the number of hits is still 7% less than the record level reached in 2019 (pre-Covid levels).

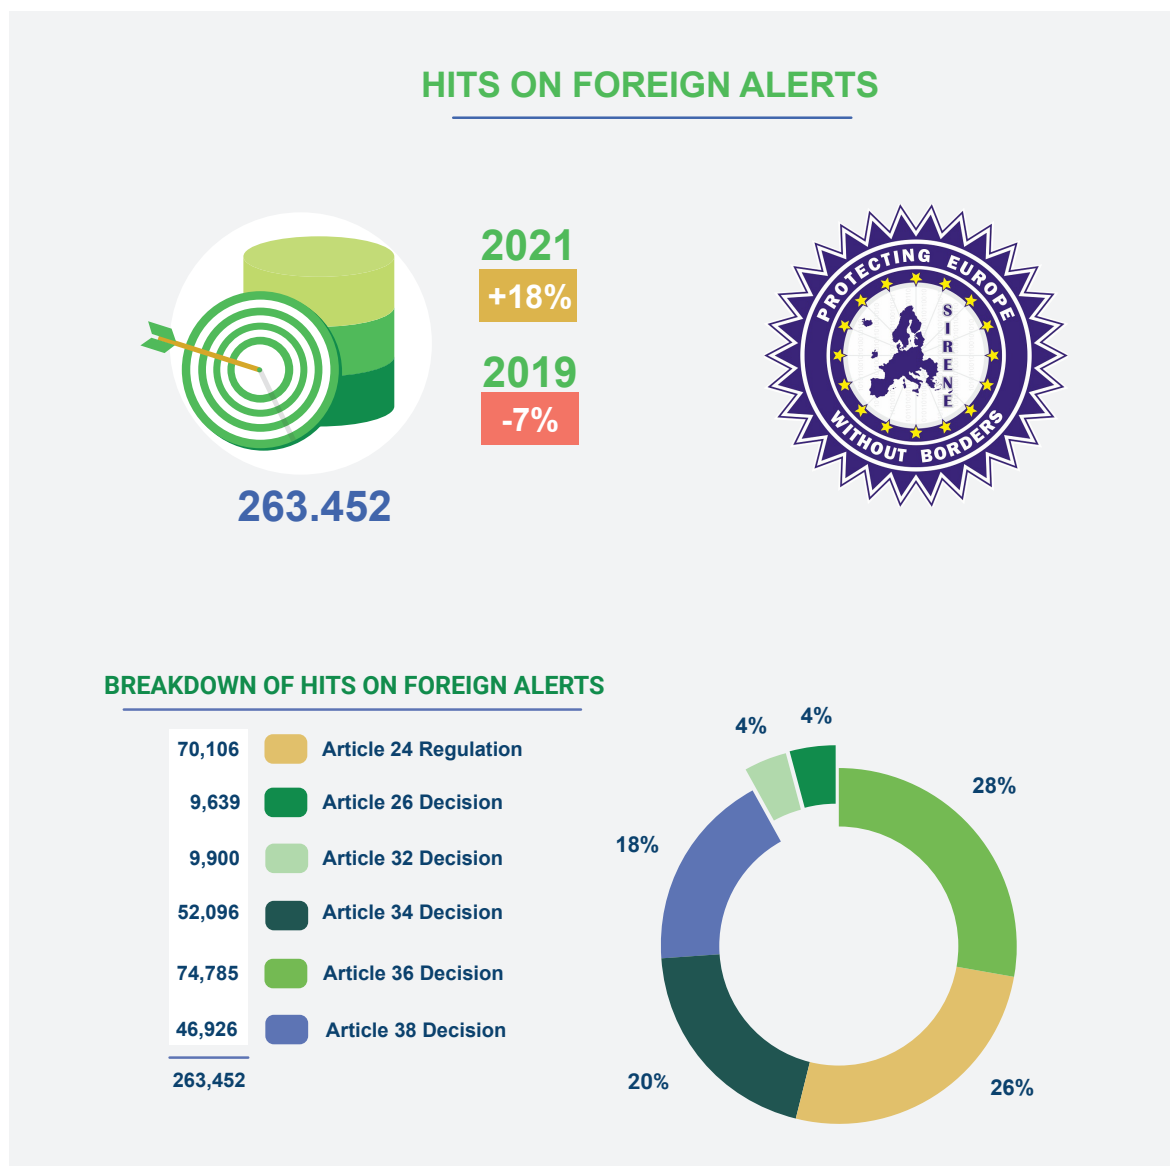

Figure 11

The share of hits per type of alert are stable, and in line with the trend seen in the past years. The majority of hits are triggered by alerts pursuant to Article 36 of the SIS II Decision, alerts on persons and objects for discreet or specific checks.

# CONCLUSION

## CONCLUSION

Figure 12 shows the trend of average of *searches performed* per day and *hits generated* per day since 2014, when annual data had begun to be published by eu-LISA<sup>9</sup>.

The increase in use is clearly visible. The record number of searches in 2022 is due to passenger traffic getting back to pre-Covid level and also to the increased systematic use of ANPR systems by some Member States resulting in more than double the automated searches compared to 2021. On the other hand, the number of hits on foreign alerts keeps growing, albeit at a different pace.

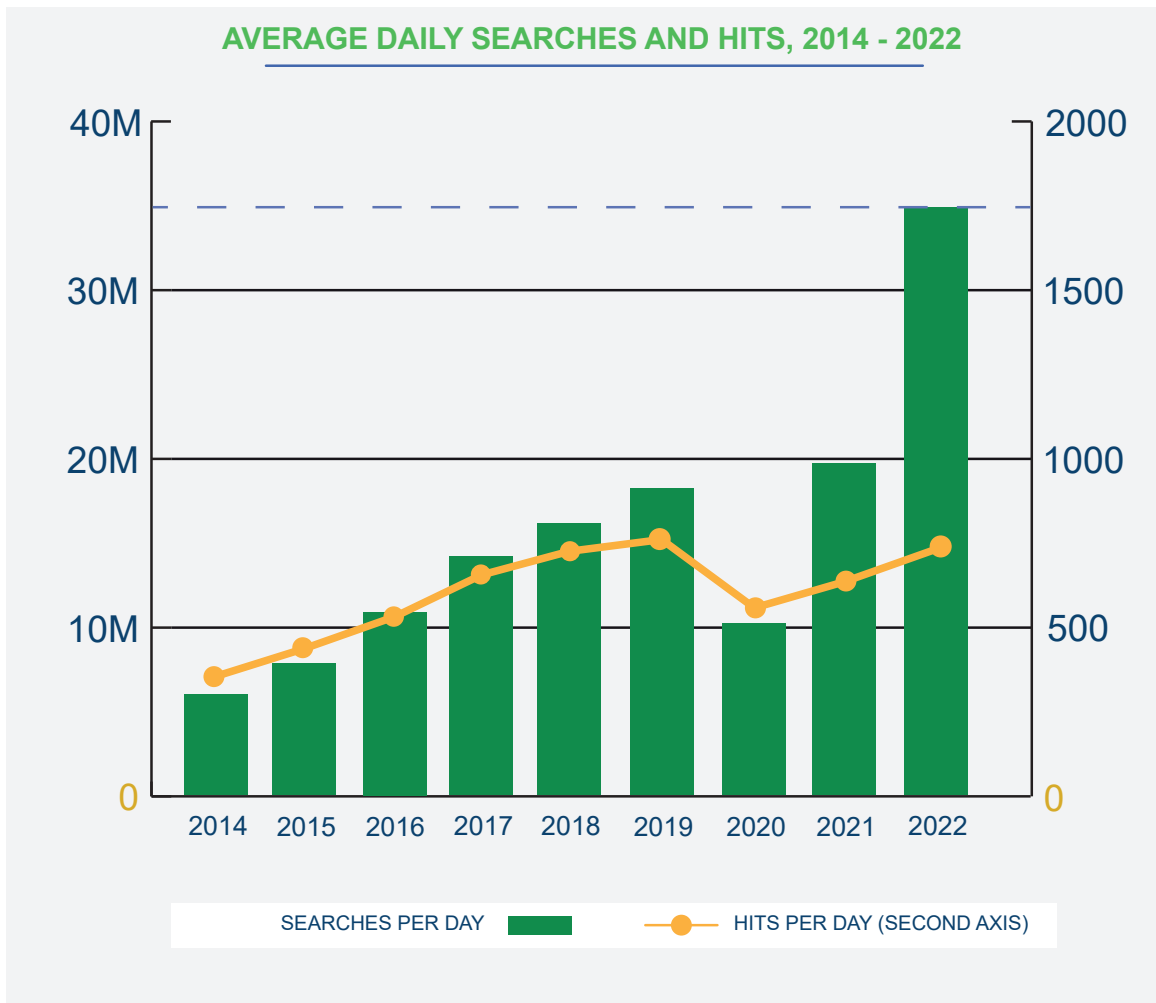

Figure 12

In 2022, there were almost 35 million searches on average per day, performed by the relevant authorities all over Europe, and over 720 hits on average were processed by the SIRENE Bureaux on a daily basis. Those figures demonstrate a clear achievement for police cooperation in the Schengen area.

This is possible thanks to a robust and stable system that is used by the relevant authorities, demonstrating once again to be at the heart of a secure Schengen Area.

<sup>9</sup> Data for 2013 was also published but only from the entry into operation of SIS II, not for the full year..

This document has been produced in application of Article 50(3) of Regulation (EC) No 1987/2006 and Article 66(3) of Council Decision 2007/533/JHA for the purpose of publishing statistics on the second generation Schengen Information System (SIS II).
